Robot changing its own battery

There are many weird and wonderful humanoid robots out there, but one of the most eye-catching machines launched this year can change its own battery pack -- making it capable of

Shenzhen-based company UBTech said it had developed a new humanoid robot that can change its own batteries. A demonstration video released on July 17, 2025 shows the whole process of the Walker S2 ...

Chinese company UBTECH has unveiled its Walker 2 humanoid robot, capable of replacing its own battery in just three minutes - no human help

Chinese company UBTech unveiled the world"s first humanoid robot that can autonomously change its own batteries in south China"s tech hub Shenzhen on Thursday mind

There are many weird and wonderful humanoid robots out there, but one of the most eye-catching machines launched this year can change its own battery pack -- making it capable of running...

UBTech"s Walker S2 becomes the first humanoid robot to autonomously swap its battery, enabling nonstop, human-free industrial work.

UBTECH"s humanoid robot, Walker S2, can now swap its own battery. This leap in autonomous robotics enables 24/7 operation. A game-changer for automation.

UBTech Robotics has launched the Walker S2, a humanoid robot capable of autonomously swapping its own batteries, enabling continuous 24/7

China"s top industrial humanoid robot is now equipped for 24/7 service. It just needs an occasional three-minute break to swap out its own battery.

China launches 24/7 self-operating humanoid robot that swaps its own battery - Watch video here Walker S2 is built by UBTECH, a Chinese firm. It stands 5 feet 3 inches tall and weighs 43 ...

The Walker S2 humanoid robot, which can change its own battery when it"s running low on power, could potentially be left to run on its own forever.

A robot that never has someone plug it in or flip the battery. It senses it"s running low, gets up and goes into a charge-up facility, swaps the power

A new humanoid robot out of China can change its own battery, marking another step toward fully

autonomous machines capable of working 24/7.

The Walker S2 robot from UBTech autonomously exchanges its batteries in just three minutes, allowing continuous operation in car factories

UBTech Robotics has unveiled its latest humanoid robot, Walker S2, which can autonomously replace its own depleted battery pack - allowing

As we continue on our path towards a future filled with tireless humanoid robots staffing factory floors, companies are looking to solve a major pain point of the tech: a limited battery life ...

Ubtech this week debuted Walker S2, a new industrial humanoid system capable of pulling out and replacing its own batteries. A video released on Thursday by the Chinese firm shows

Meet the Walker S2, the world"s first robot that can change its own battery without any human help. This game-changing innovation is set to

When one battery starts to run low, the robot turns its torso, uses built-in tools on its arms, and removes the drained battery. It then picks up a

UBTech"s Walker S2 humanoid robot now features a quick battery swap, greatly extending runtime. Here"s what this improvement means for real-world use.

Enter Walker S2, a humanoid robot developed by China"s UBTECH Robotics that casually sidesteps this problem by swapping its own batteries. It"s

Video footage shows the robot walking up to a rack of swappable batteries. After unnaturally flipping its arms around, the automaton replaces one

A new video from the Chinese robotics company UBTECH, which shows their humanoid robot Walker S2 changing its own battery on its own, has

China unveils a humanoid robot that can autonomously change its own batteries, enabling continuous operation without human intervention.

UBTECH launched the world"s first humanoid robot capable of autonomously swapping its own battery. Walker S2 uses its arms to replace batteries and work 24/7.

Chinese company UBTech unveiled the world"s first humanoid robot that can autonomously change its own batteries in south China"s tech hub

Robot changing its own battery

No humans needed! Watch this robot replace its own battery and get back to work in seconds China"s Walker S2 robot can now change its own battery, allowing it to work longer in automated factories. This ability reduces downtime and points to a future where robots need less human help for routine
