Transitioning the world into sustainable energy. For the first time people can take charge of their own electricity. We are here to help you take advantage of that.

As a bonus, BlueShift's low-cost, energy-efficient technologies also extract CO₂ directly from seawater as

Blueshift energy solutions

limestone, helping to address the growing environmental issue of ocean acidification.

With headquarters in South Africa and partners throughout Africa, BlueShift Energy was created to fulfill the lack of energy in Africa through supply and procurement of practical energy solutions.

Major components of the system are Hybrid inverter and battery storage and integration of the utility grid or generator. Our back up system uses Utility to charge the batteries, the electricity stored in

Its cost- and energy-efficient technologies also extract CO₂ directly from seawater as limestone, helping combat the problem of ocean acidification.

BlueShift's electrochemical technology is a promising new solution to this problem, while its domestic production of critical minerals could contribute to resilient supply chains for clean-energy
