

Energy production

Energy production refers to the process of generating energy, which significantly consumes water, especially in thermoelectric power plants and biofuel manufacturing, with its water footprint varying

About 20 million barrels of oil, or about one-fifth of daily global production, flow through the strait every day, according to the US Energy Information Administration, which calls the channel a ...

Qatar's state-run energy firm says it has halted liquefied natural gas production after Iranian attacks, sending gas prices soaring in Europe and Asia, as Saudi Arabia announced it was ...

Oil prices have jumped as U.S. and Israeli attacks on Iran and retaliatory strikes against Israel and U.S. military installations around the Gulf ripple through the global energy supply chain.

Approximately 21 million barrels of oil a day - in the form of crude, condensates and petroleum products - pass through the Strait of Hormuz daily, according to the US Energy

Global energy costs soar as Iran crisis disrupts shipping, oil and gas production 3D-printed oil barrels and a map showing the Strait of Hormuz and Iran appear in this illustration taken March 2 ...

Fireball explosions have rocked a Bahrain oil facility as Iranian drones target key energy production infrastructure.

France opened a flurry of nuclear power plants in the 1980s and 1990s, giving it low-carbon electricity ever since France's nuclear fleet gives it one of the world's

World Energy Production Statistics in a interactive application, including maps and graphs. Data detailed by region with updated statistics by region. The global energy database can also be directly extracted.

Experts say returning production to full capacity could take at least a month as disruptions ripple through global energy markets

Qatar's halt in LNG production, following Iranian drone attacks, triggers a surge in European gas prices, raising global supply concerns. Discover the impact on energy markets and the

The conflict raging in the Middle East will test the resilience of a global economy that has already contended with wars and trade disruptions over the past year.

Death rates per unit of electricity production Death rates are measured based on deaths from accidents and air

Energy production

pollution per terawatt-hour of electricity.

This presentation explores the fascinating world of energy production, delving into various fuel types, energy sources, and the methods employed to generate power.

Die Energy-Charts bieten interaktive Grafiken zu: Stromproduktion, Stromerzeugung, Emissionen, Klimadaten, Spotmarktpreisen, Szenarien zur Energiewende und eine umfangreiche

Britain's Harbour Energy raised its 2026 output outlook on Thursday, citing a strong start to the year helped by early contributions from its newly acquired LLOG assets in the Gulf of Mexico.

Venezuela state oil company Petróleos de Venezuela S.A. announced signing new contracts to supply crude oil and refined products for the U.S. market.

Iranian drone strikes forced Qatar to halt liquefied natural gas (LNG) production Monday, jolting global energy markets and raising fears about supply disruptions as Tehran increased its

The repercussions of the ongoing U.S.-Iran war are being felt across the world, with U.S. fuel prices, European natural gas costs and Asian tanker freight rates all jumping sharply since strikes ...

Global energy production remains heavily concentrated among China, the United States, Russia, and India, which collectively dominate output

Energy prices soar as stock and bond markets consider long Middle East war Iraq and Qatar are shutting down oil and gas production with Strait of Hormuz closed, sparking concerns

European gas prices have surged by 46% following a decision by Qatar Energy to halt production at a major liquefied natural gas (LNG) plant due to attacks in the Middle East.

Wind & Solar Energy Production Dataset contains hourly wind and solar generation data from France spanning January 2020 to November 2025, featuring 51,864 complete records with 9

European natural gas prices surged on Monday as the escalating conflict in the Middle East caused Qatar to stop LNG production at the world's top plant. [View on euronews](#)

While markets appeared barely fazed by the fate of Venezuela's oil industry, they are considerably more nervous about the potential impact of

Rising US energy production and LNG growth have fundamentally restructured global market resilience, yet the physical vulnerability of the Strait of Hormuz remains a critical systemic risk.

Energy production

Iran's oil and gas production facilities are concentrated in southwestern provinces: Khuzestan for oil and Bushehr for gas and condensate from South Pars.

At the center of concern for the moment is the fate of energy produced in the Middle East, source of 30 percent of the world's oil and 17 percent of its natural gas. Any disruption to that flow ...
