

Smart grid 2025

The event brought together over 100 high-level stakeholders from across Europe to discuss the future of smart grids and their role in driving the EU's clean energy transition.

This paper presents a layered and modular system architecture specifically designed to support real-time monitoring and control in smart agriculture. The proposed design leverages edge-cloud

High-energy lithium-ion systems, quasi-solid-state configurations and sodium-ion batteries were among the main strategies pursued in 2025 to achieve that goal.
