Our solar selection software is an integral tool to sizing and selecting the proper solar water pumping system for each project. A Solar drive with integrated A/C backup power, by the grid or a generator.

A PV solar-powered pump system has three main parts - one or more solar panels, a controller, and a pump. The solar panels make up most (up to 80%) of the system's cost. The size of the PV system is directly dependent on the size of the pump, the amount of water that is required, and the solar irradiance available. The purpose of the controller is twofold. Firstly, it matches the output power that the pump receives wit
